**Notes on Tennessee COVID-19 Cases**: The number of cases includes both confirmed and probable cases reported by the Tennessee Department of Health. Confirmed cases are defined as those that have been confirmed by the state's laboratories or by local health departments. Probable cases are defined as those with symptoms and possible exposure to the virus who have been tested but not confirmed as positive. The number of deaths includes both confirmed and probable cases. The number of hospitalizations includes the number of patients currently hospitalised, and may not reflect the total number of hospitalisations throughout the course of the disease. The number of recoveries includes those who have recovered and are no longer considered infectious.
