**Clinical Information**

- **Symptoms**
  - Aphasia
  - Behavioral changes
  - Fever lasting 2—7 days
  - Headache
  - Confusion
  - Hematuria
  - Profound weakness
  - Cough
  - Jaundice
  - Diarrhea
  - Joint Pain
  - Rash
  - Epistaxis
  - Leukopenia
  - Seizures
  - Eye pain
  - Loss of consciousness
  - Sore Throat
  - Fever
  - Muscle aches
  - Photophobia
  - Plasma leakage
  - Profound weakness
  - Rash
  - Seizures
  - Sore Throat
  - Vomiting

- **Sources of Infection** (select all that apply - Y=Yes, N=No, U=Unknown):
  - Y: Occupationally lab acquired
  - N: Non-occupationally lab acquired
  - Y: Blood transfusion received
  - N: Blood donor
  - Y: Identified by blood donor screening
  - N: Donation date: ___/___/___
  - Y: Organ donor
  - N: Organ transplant received
  - Y: Breastfed Infant
  - N: Infected in Utero

- **Other**
  - In the last 30 days since symptom onset
  - Did the patient travel outside home county in the 4 weeks before symptom onset?
    - Yes
    - No
  - Was the patient part of a group trip?
    - Yes
    - No
  - Group Coordinator (Name/phone: __________)
  - Any known ill contacts (Name/phone: __________)

**Classical Syndrome**

- Acute Flaccid Paralysis (AFP) without Encephalitis or Meningitis
- Encephalitis - including meningoecephalitis (with or without AFP)
- Meningitis (with or without AFP)

**Non-Classical Syndrome**

- Asymptomatic (for tissue and blood donors with no symptoms)
- Feverile Illness
- Hepatitis/Jaundice
- Multi organ failure
- Other clinical

**Case Status** (see case definition for details)

- Confirmed
- Suspect
- Probable
- Not a Case
